

New Microsoft Products

Let DP Solutions help you evaluate the latest products from Microsoft:

- [Windows 7](#)
- [Office 2010](#)
- [Windows Server 2008](#)
- [Exchange 2010](#)

Designed to meet the needs of small and midsize businesses, the Windows® 7 Professional operating system delivers a powerful combination of innovation, improved performance, and productivity. At DP Solutions we're ready to help you focus on what matters most, your business, by providing you with a solution that:

- **Works the way you want.** Fast, reliable, and compatible, Windows 7 Professional delivers a solid foundation for running a business in today's competitive environment.
- **Helps you get more done.** Find what you need quickly, easily connect to your networks, and be more productive—whether you're at work, at home, or on the road.
- **Safeguards your work.** Keep your business up and running with new security and recovery options that help prevent security threats and data loss.

Top 10 Benefits of Windows 7

1. It's fast and reliable.

Responsive and ready—you can start using your PC quickly with fast startup, shutdown, sleep, and resume from Standby. Further performance improvements lead to fewer interruptions and prompts, as well as faster recovery from problems when they happen.

2. It works with what you have today.

Specifically designed with compatibility in mind, Windows 7 Professional works with a broad set of devices and applications. In addition, Windows XP Mode provides you with the flexibility to run many older Windows XP productivity applications right from the Windows 7 desktop.

3. Helps you find what you need quickly.

Find what you need fast with instant search, jump lists, and a larger, customizable taskbar with pop-up previews. Type a few letters in the search box, and files, applications, or even menus appear in seconds. Similar types of documents (such as financial records or customer lists) can be grouped into Libraries—making it easy to find them even if they are stored in different folders or on different PCs.

4. Makes the things you do every day easier.

Everyday tasks are streamlined and simplified—commonly used resources are put within easy access and clutter is minimized on the desktop. Enhancements to the Windows Aero® desktop experience (such as Aero Snap, Aero Peek, and Aero Shake) help you intuitively navigate, arrange, and work with multiple open windows on the desktop.

5. Helps you easily share your files and printers.

If you're a small business without a server, you can easily share documents, printers, and devices across multiple PCs running Windows 7. For businesses with a server, Windows 7 Professional lets you connect PCs quickly and more securely to both your

wired and wireless domain networks. This can better help you manage security and the costs of multiple PCs. In addition, with Location-Aware Printing, your documents automatically get sent to the right printer—whether you're at work or at home.

6. Allows mobile workers to stay productive anywhere.

With access to all your mobile settings in one place and greater connection and networking options, Windows 7 Professional makes on the go computing easier than ever. Now you can access and share all your work computer programs, files, and network resources—whether you're at home or on the road. You can even disconnect from the network, work offline, and then have your network files automatically and seamlessly updated with any new changes.

7. Helps you easily restore deleted files or folders.

Windows 7 Professional lets you schedule automatic periodic backups to save your data or an entire system image to a network location or a local drive. This helps you quickly restore individual files or folders that may get accidentally deleted or even an entire PC in the event of a hard drive failure or the presence of malicious software.

8. Helps you better protect and secure confidential information.

Protect your business's confidential information, such as credit card numbers or employee information, with the Encrypting File System. This feature provides user-level file and folder encryption to enables strong data protection and control.

9. Offers greater online protection.

Keep your business up and running with Windows Defender, a monitoring system that helps protect your computer against Internet threats, spyware, and other malicious attacks. This program coupled with Windows Internet Explorer® 8 delivers improved protection against security and privacy threats.

10. Helps you solve PC problems quickly.

Windows 7 Action Center gives you one place to view, diagnose, and solve common PC problems. Now you can easily access built-in troubleshooters for several different types of problems, such as printing, Internet connections, performance, or power issues.
